

Optimization of Behaviours by IoT for Energy Efficiency in Smart Buildings

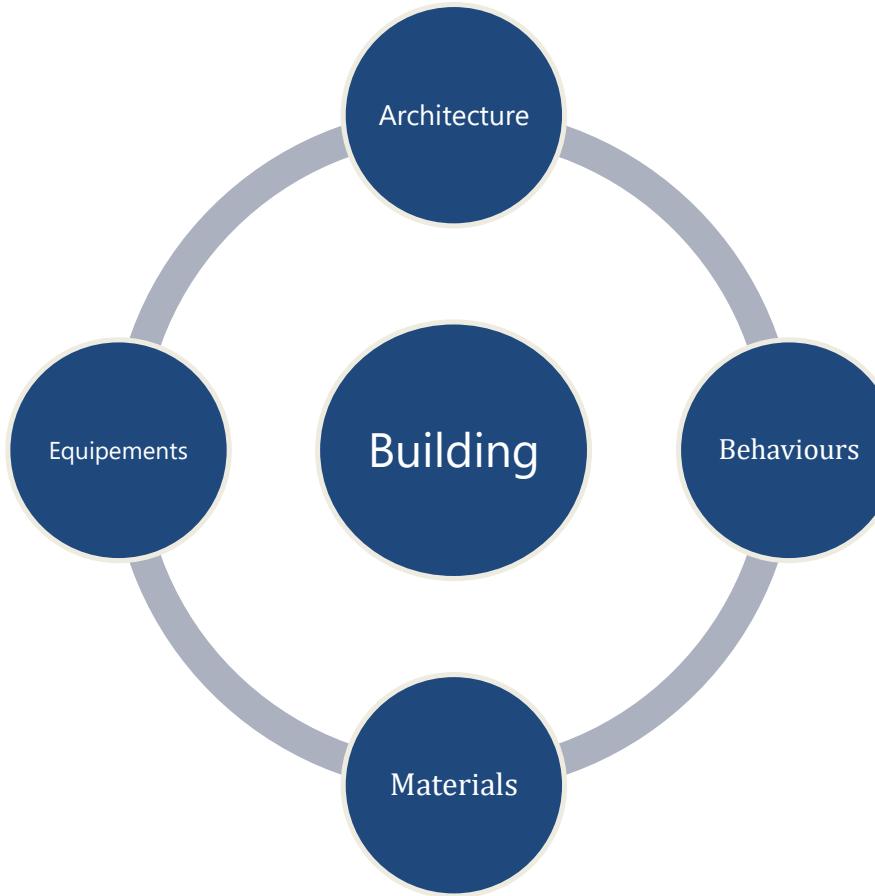

Lucas Desport
Sandrine Selosse,
Gilles Guerassimoff

Context

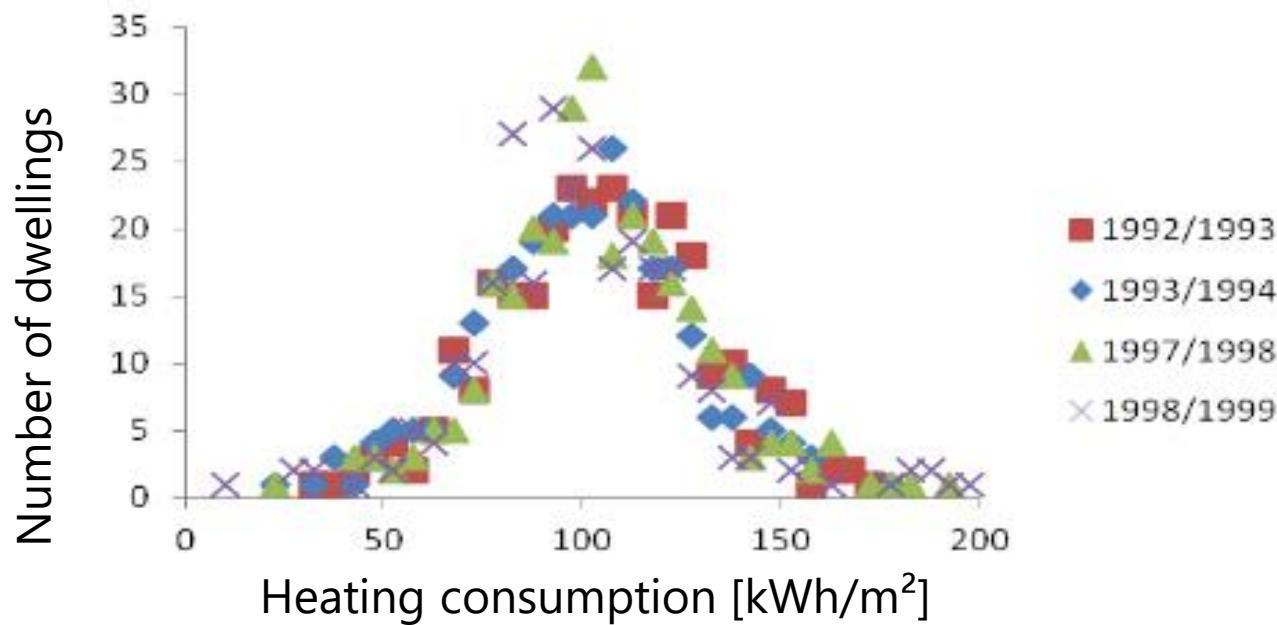

Context

What are the four main conception parameters of a building?

Context

What potential is hiding behind our behaviours?

R. Andersen, « The influence of occupants' behaviour on energy consumption investigated in 290 identical dwellings and in 35 apartments », p. 3.

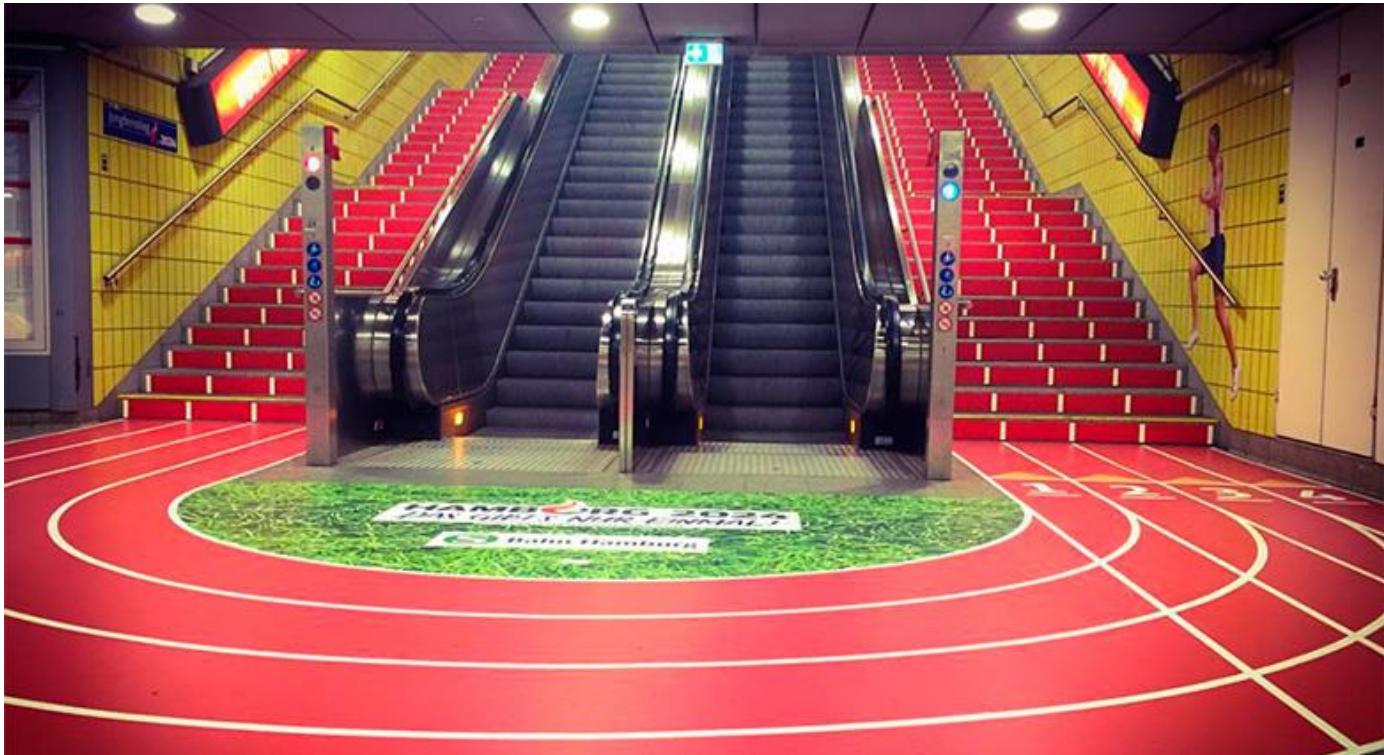

The *nudge* theory

- Cass Sunstein and Richard Thaler

« We have no interest in telling people what we need.
We want to help them to achieve their goals. »

Dashboard

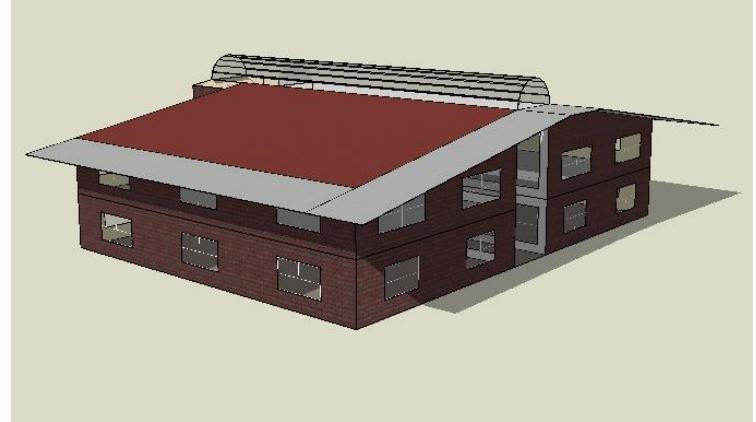

Building Performance Simulations of behaviours

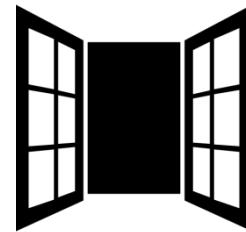

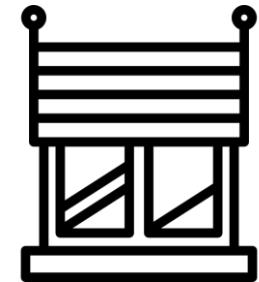

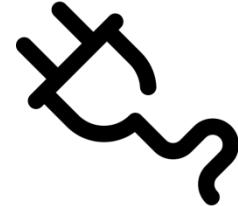

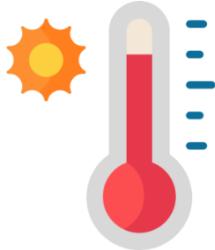

Building Performance Simulations of behaviours

- Evaluate *Energic* solution on
 1. Potentials of the challenges launched
 2. Sensibilisation generated progressively
 3. Considering probabilities
- For different buildings
 - Dwelling
 - Residential building
 - Small office building

Building Performance Simulations of behaviours

Evaluate the potential of the Energic solution

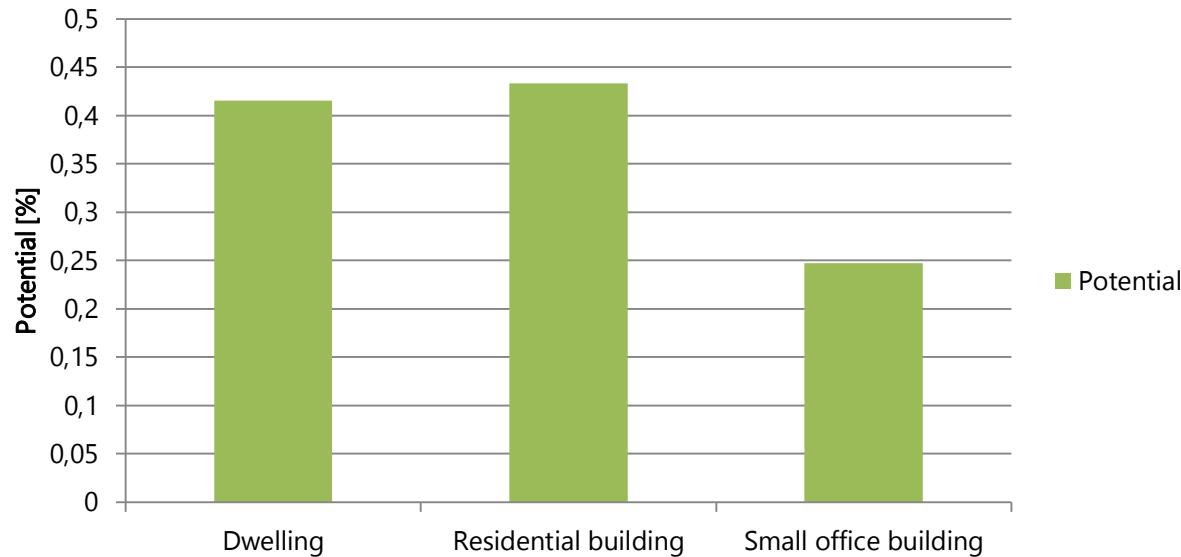

Building Performance Simulations of behaviours

Evaluate the potential of the Energetic solution

- Identical occupation scenarios from UK NCM
- Extreme scenarios taken from ADEME

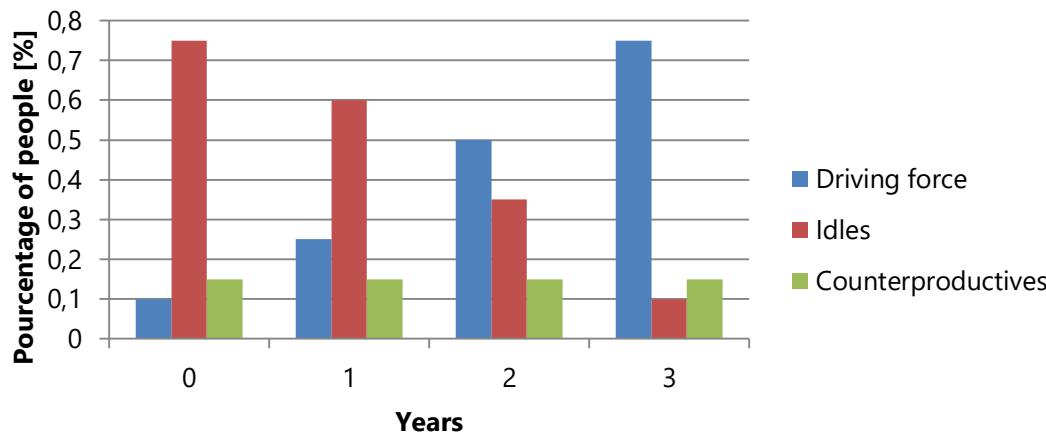

Extreme potentials of power reduction

Building Performance Simulations of behaviours

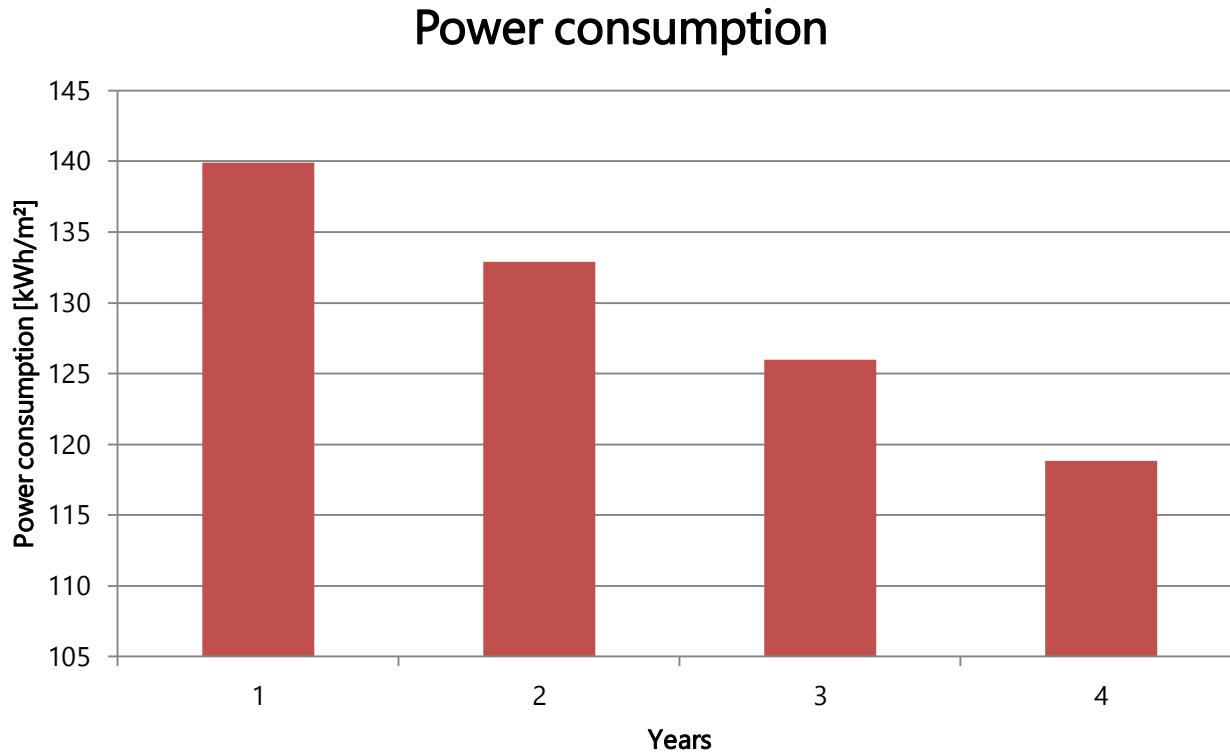

How to simulate the sensibilisation broadcasted by the application?

Year	Driving forces	Idles	Counterproductives
0	10%	75%	15%
1	25%	60%	15%
2	50%	35%	15%
3	75%	10%	15%

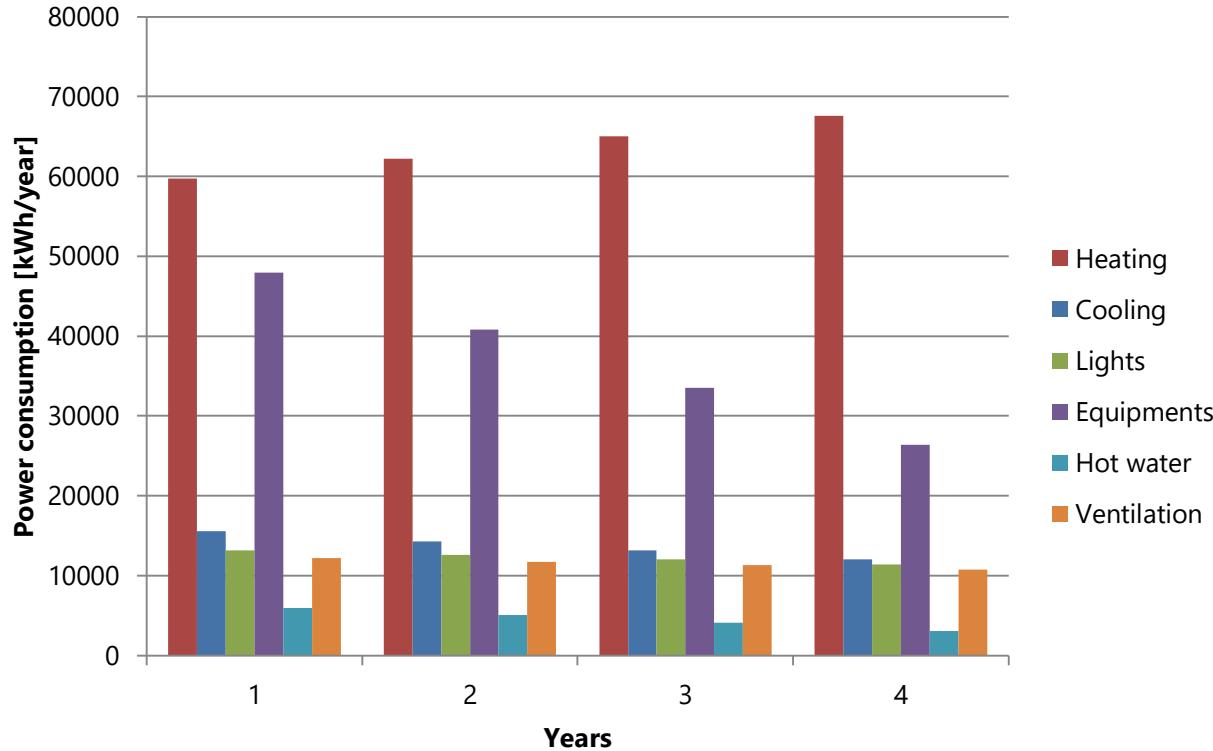

Building Performance Simulations of behaviours

```

Simulating energy-related occupant behaviour

How to simulate the stochastic nature of behaviours?

- Exploiting a bias: suggestion

About a behaviour

Do you
already
apply it?

Will you
change?

When?

Simulating energy-related occupant behaviour

How to simulate the stochastic nature of behaviours?

- Exploiting a bias: suggestion

How do you set your
thermostat?

21°C

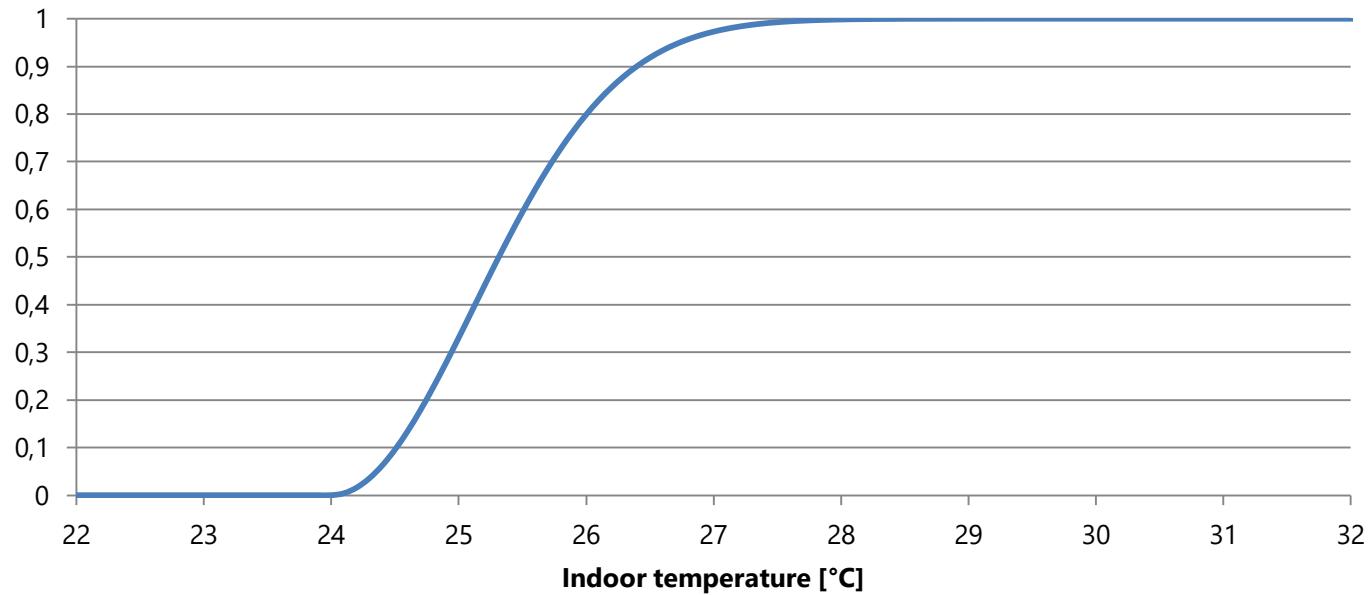

Will you
low it
down?
20°C

When?
In spring

Simulating energy-related occupant behaviour

Find back our own probability curves

Probability function for HVAC activation

Conclusion

Conclusion

1. Multi-disciplined approach
2. Crossing difficulties
3. Data bank for neuron network
4. Exploit more mature data
5. Optimize power consumption of buildings according behaviours, considering occupant comfort
